

GENE HAROLD CINTO

Full Stack Developer | AI & Workflow Automation

geneisme20@gmail.com | LinkedIn: linkedin.com/in/genecinto | GitHub: github.com/JinniHarold

PROFESSIONAL SUMMARY

Results-driven IT graduate with hands-on experience designing and deploying production-grade AI automation pipelines, full-stack web and mobile applications, and website migrations. During an internship at StellarPH, independently architected and launched a 4-workflow n8n automation pipeline using Azure OpenAI, Perplexity AI, and the Notion API that generates up to 3 SEO-optimized articles per day for StartupNews.ph — fully automated from RSS ingestion to Slack notification with zero manual writing intervention. Also completed a website migration training at Strike Marketing, converting client sites loveiscleanhouse.com and astcontracting.com from WordPress to static HTML and migrating their domains to Namecheap. Proficient in REST API integration, LLM prompt engineering, ASP.NET Core MVC, and Android (Kotlin) development. Targeting Junior Software Engineer, AI/Automation Engineer, or Full Stack Developer roles.

TECHNICAL SKILLS

Languages: Java, C, C++, C#, PHP, Kotlin, SQL, Python

Frameworks & Technologies: ASP.NET Core MVC, Bootstrap, Android SDK, Kotlin Jetpack, Arduino IDE

Databases: Microsoft SQL Server, MS Access, MongoDB, Notion (API-integrated database)

Cloud & Deployment Platforms: Microsoft Azure (Azure OpenAI, Azure SQL Database), Cloudinary (CDN), Railway, Render, Netlify, DigitalOcean

Domain & Web Platforms: WordPress, Namecheap (domain migration & management)

AI & Automation Tools: n8n, Azure OpenAI (GPT), OpenAI API, Perplexity AI, OpenAI Image Generation, LLM Prompt Engineering, GitHub Copilot, Claude Code

APIs & Integrations: Notion API, Slack API, Stripe API, Cloudinary API, REST API, Webhook Integration, JSON/Structured Output Parsing

Developer Tools: GitHub, GitHub Actions (CI/CD), Figma, Framer, VS Code, Android Studio

EXPERIENCE

IT Intern — StellarPH (StartupNews.ph)

2026

Designed, built, and deployed a fully automated end-to-end AI article generation pipeline for StartupNews.ph using n8n. The pipeline produces up to 3 publication-ready, SEO-optimized articles per day across Fintech, Startups, Investment, and Government Policy categories — with zero manual writing intervention.

- WF1 – Article Collection: engineered an RSS ingestion workflow polling 10 PH/SEA news sources every 10 minutes, eliminating duplicates via Notion API GUID lookup, and classifying each article using an Azure OpenAI LLM chain
- WF2 – Article Scoring: built an AI quality-scoring pipeline evaluating articles across 4 weighted criteria on a 0–100 scale, parsing structured JSON output, and writing scores and reasoning back to Notion via API
- WF3 – Topic Decision Maker: architected a scheduled decision workflow running 3x daily that enforces an 80+ quality threshold and selects the top-ranked unused article, enabling up to 90 automated publications per month
- WF4 – Article Generation: built the pipeline's most complex workflow, chaining 3 Azure OpenAI model calls, Perplexity AI live web research across 50+ PH/SEA sources, OpenAI Image Generation, Cloudinary API, Notion API, and Slack API
- Designed and published web pages for StellarPH using Framer, contributing to the company's public-facing web presence
- Configured Azure deployment pipelines, Azure SQL Database, and GitHub Actions CI/CD workflows during the capstone semester

Web Development Trainee — Strike Marketing

2026

2-week training program focused on website migration and static site conversion, working on loveiscleanhouse.com and astcontracting.com.

- Recreated two clients' existing WordPress websites (loveiscleanhouse.com, astcontracting.com) as static HTML/CSS to support full site migrations off WordPress
- Rebuilt page structure and styling by hand to closely match each original design while producing lightweight, dependency-free markup
- Migrated site domains from WordPress to Namecheap, handling DNS and registrar transfer end-to-end
- Test-deployed the sites on Render and Netlify to validate builds live before final deployment to DigitalOcean

PROJECTS

BlueprintPro — AI-Powered Architect-Client Matching Platform

2026

ASP.NET Core MVC | OpenAI API | Stripe API | Kotlin | Android SDK | PostgreSQL | Railway

- Built a cross-platform web and Android application connecting clients with architects via AI-powered natural language portfolio search using OpenAI API semantic matching
- Implemented a REST API backend with ASP.NET Core MVC serving both web and Android (Kotlin) clients with full CRUD operations
- Integrated Stripe API for end-to-end payment processing between clients and architects; deployed backend on Railway

Nimbus — Smart IoT Clothes Protection & Rainwater Harvesting System

2025

Arduino (C++) | Kotlin | Android SDK | IoT | Real-time Notifications

- Designed and built an IoT-based clothes protection system using Arduino (C++) for sensor logic and actuator control, paired with a Kotlin Android app for real-time push notifications and status monitoring

DailyDo — Rule-Based Task Management System <i>PHP Rule-Based Logic MySQL</i> Built a PHP task management system with a rule-based prioritization engine evaluating deadlines, importance, and categories to produce ranked, actionable task views	2025
Enrollment Management System <i>C# MS Access .NET</i> Developed a C# desktop enrollment system with structured data processing and an MS Access backend for secure student information storage and retrieval	2024
Early Projects - Java Flappy Bird arcade game with selectable characters and difficulty maps - Java music player with synchronized lyric display - Console Sudoku in C with variable grid dimensions	2023–2024

EDUCATION

Bachelor of Science in Information Technology — University of Cebu, Banilad (2022–2026)
TVL – Programming — University of Cebu, Banilad (2020–2022)

ACHIEVEMENTS

3rd Place, Campus UI/UX Design Competition — awarded for designing an intuitive, accessible interface demonstrating strong user-centered design principles and creativity.
